PROFESSIONAL SUMMARY

Entry-level Data Analyst with hands-on project experience in Python, SQL (MySQL), Power BI, DAX, and Excel. Skilled in data cleaning, exploratory data analysis (EDA), data modeling, KPI reporting, and interactive dashboard development. Analyzed 51,290 sales transactions, 1,000 customer financial profiles, and 54,600 player-match records from a Kaggle-sourced FIFA World Cup 2026 dataset to assess profitability, customer risk distributions, and player and team performance.

TECHNICAL SKILLS

Programming and Analysis: Python, Pandas, NumPy, Matplotlib, Seaborn, exploratory data analysis, statistical analysis, data cleaning, data transformation
SQL and Databases: SQL, MySQL, CTEs, window functions, relational databases, data normalization
Business Intelligence: Power BI, DAX, data modeling, calculated measures, KPI dashboards, drill-through filters, interactive reporting
Excel: Pivot Tables, VLOOKUP, spreadsheet reporting
Analytics Practices: ETL workflows, data visualization, data storytelling, trend analysis, customer segmentation, business reporting

PROJECTS

Global Superstore Sales & Profit Analytics | Python, Pandas, MySQL, Power BI, DAX

- Developed a reusable Python script to validate 51,290 sales transactions (2011–2014), checking missing values, duplicate records, and data types.
- Investigated sales and profitability across categories, markets, and customer segments using MySQL to identify loss-making products and analyze discount patterns.
- Designed a four-page Power BI dashboard with DAX measures for sales, profit margin, average discount, and average order value; reconciled results across Python, MySQL, and Power BI, confirming approximately 12.6M in sales and an 11.6% profit margin.

Customer Financial Profile Analysis | Python, Pandas, MySQL, Power BI, DAX

- Profiled 1,000 customer records using Pandas, assessing data quality and visualizing income, savings, credit score, and loan distributions with Matplotlib and Seaborn.
- Segmented customers by employment status, age group, and risk level using MySQL aggregations and ranking; identified self-employed customers as the highest-income group, averaging 84.5K compared with 78.6K for unemployed customers.
- Created a four-page Power BI dashboard covering financial profiles, risk analysis, and customer segmentation, using DAX KPIs and interactive slicers to highlight a nearly balanced risk distribution: 325 Low, 341 Medium, and 334 High.

Player Performance Analysis – FIFA World Cup 2026 Dataset | Python, Pandas, MySQL, Power BI, DAX

- Analyzed a Kaggle-sourced football performance dataset with 54,600 records and 75 columns using Python, Pandas, and NumPy; performed data cleaning, preprocessing, and exploratory data analysis (EDA) to examine player statistics, scoring patterns, and team performance.
- Used MySQL queries with aggregations, joins, and window functions to rank players and compare team performance across goals, ratings, positions, scoring, and defensive metrics.
- Developed an interactive three-page Power BI dashboard using DAX KPIs, slicers, player comparisons, and team performance visualizations to support performance analysis and reporting.

EDUCATION

Sri Venkateswaraa College of Technology | 2022–2026
Bachelor of Engineering in Electronics and Communication Engineering | CGPA: 7.09

CERTIFICATIONS

- IBM Databases and SQL for Data Science with Python — Coursera
- Microsoft Power BI Fundamentals and Data Modeling — Coursera
- Google Data Analytics Professional Certificate — Coursera
- Google Crash Course on Python — Coursera
